SPA | WIRLPOOL

WWW.STAPAR.PL

STAPAR is

Leading manufacturer of pool, garden, home and automotive chemicals. Our main goal is to realize the vision of our customers.

STAPAR is an important supplier to retail chains, wholesalers and distributors. It sells its products in Poland, Slovakia, Austria, Germany, France, Norway and Sweden.

STAPAR is a manufacturer and supplier:

- Swimming pool chemicals for private pools
- Chemicals and cosmetics for spas and hot tubs
- Cleaning products for the home and garden
- Automotive chemicals and car cosmetics

Joint success

We work for our customers and for them we achieve the the best results. Success in our field we implement in local and international markets. Proof of the high quality of our services is the continuously maintained ISO 9001 certification and its growing number of of satisfied customers. The year 2019 marks an important 10-year anniversary for the company. For 15 years now, we have been perfecting production technology to guarantee our customers products of of high quality.

CHLORINE GRANULES

1 KG, 3 KG, 5 KG

Fast-acting, safe granular agent for use in swimming pools designed for rapid disinfection of pool water. **AQUA FUN chlorine granules** quickly removes fungi, bacteria. Its fast action makes the water clearer and the use of swimming more pleasant. **AQUA FUN chlorine granules** are easy to use and dispense.

Directions for use: always before dosing AQUA FUN chlorine granules, check the pH of the water with a pH tester. If it is different from 7.0-7.6, the pH of the water should be adjusted with pH- and pH+ preparations. If the water is clear, use 100 g per 10 m³ of water. If the water is less clear, use AQUA FUN chlorine granules at a dose of 180 g per 10 m³. Always remember to apply AQUA FUN chlorine granulate in the evening after bathing. AQUA FUN chlorine granules are best used after dissolving in water then pouring the water into the pool. Keep the active chlorine level at 1 mg/l, when the active chlorine level drops it is necessary to reapply AQUA FUN chlorine granulate. Be sure to check the pH level and the level of active chlorine in the pool with appropriate tests, because depending on weather conditions and the large number of bathers, these parameters change.

CHLORINE TABLET 200G

1 KG, 3 KG, 5 KG

Slow dissolving **AQUA FUN chlorine tablet 200 g** provide long-lasting disinfection of pool water. Through slow-release active chlorine allow you to enjoy the comfort of clean water. The action of the tablets effectively protects the water from organic contaminants, fungi and bacteria. **AQUA FUN chlorine tablet 200 g** is easy to use and dispense. Product form: tablet.

Directions for use: Before dosing AQUA FUN chlorine tablet 200 g, always check the pH of the water with a pH tester. If it is different from 7.0-7.6, the pH of the water should be adjusted with AQUA FUN pH- and AQUA FUN pH+. Always remember to use AQUA FUN chlorine tablet 200 g in the evening after bathing. Be sure to check the pH level and the level of active chlorine in the pool with appropriate tests, since depending on weather conditions and the large number of bathers these parameters change. AQUA FUN chlorine tablet 200 g should be dosed every 7 days with 10 tablets per 20 m³ of pool water. The appropriate amount of tablets should be placed in the skimmer or float and turn on the circulation pump if it is included with the pool. For proper disinfection, also use AQUA FUN chlorine granules in granules at a dose of 100 g/10 m³. The residue of free chlorine in the water should be in accordance with the Regulation of the Ministry of Health on the quality of water intended for human use.

Note: Never apply tablets directly to the water, dosing is best carried out in the evening when there are no bathers.

CHLORINE TABLETS 20G

1 KG, 3 KG, 5 KG

Slow dissolving **AQUA FUN chlorine tablets 20g** provide long-lasting disinfection of pool water. Through slow-release active chlorine allow you to enjoy the comfort of clean water. The action of the tablets effectively protects the water from organic contaminants, fungi and bacteria.

AQUA FUN chlorine tablets 20g are easy to use and dispense. Product form: tablets.

Directions for use: always before dosing AQUA FUN chlorine tablets 20g, check the pH of the water with a pH tester. If it is different from 7.0-7.6 you should adjust the pH of the water with AQUA FUN pH- and AQUA FUN pH+. Always remember to use AQUA FUN Tabs chlorine 20 g in the evening after bathing. Be sure to check the pH level and the level of active chlorine in the pool with the appropriate tests, because depending on weather conditions and the large number of bathers, these parameters change. AQUA FUN chlorine tablets 20g should be dosed every 7 days with 10 tablets per 20 m³ of pool water. The appropriate amount of tablets should be placed in the skimmer or float and turn on the circulation pump if it is included with the pool. For proper disinfection, also use AQUA FUN chlorine granules in granules at a dose of 100 g/10 m³. The residue of free chlorine in the water should be in accordance with the Regulation of the Minister of Health on the quality of water intended for human use.

CHLORINE TABLETS BLUE 20G

1 KG, 3 KG, 5 KG

Slow dissolving **AQUA FUN chlorine tablets blue 20g** provide long-lasting disinfection of pool water. Through slow-release active chlorine, they allow you to enjoy the comfort of clean water, coloring it blue. The action of the tablets effectively protects the water from organic contaminants, fungi and bacteria. They facilitate flocculation, combining dirt particles to effectively purify pool water. They concentrate small impurities into larger ones. They contain a colorant, which gives pool water a blue-glow tint. **AQUA FUN chlorine tablets blue 20g** are easy to use and dispense. Product form: tablets.

Directions for use: before dosing AQUA FUN chlorine tablets blue 20g, check the pH of the water with a pH tester. If it is different from 7.0-7.6, the pH of the water should be adjusted with AQUA FUN pH- and AQUA FUN pH+. Always remember to use AQUA FUN blue chlorine tablets 20g in the evening after bathing. Be sure to check the pH level and the level of active chlorine in the pool with appropriate tests, because depending on weather conditions and the large number of bathers, these parameters change. AQUA FUN chlorine tablets blue 20g should be dosed every 7 days with 10 tablets per 20 m³ of pool water. The appropriate amount of tablets should be placed in the skimmer or float and turn on the circulation pump if it is included with the pool. For proper disinfection, also use AQUA FUN CHLORINE GRANULATE in granules at a dose of 100 g/10 m³. The residue of free chlorine in the water should be in accordance with the Regulation of the Minister of Health on the quality of water intended for human use.

CHLORINE TABLETS MULTI 20G

1 KG, 3 KG, 5 KG

Slow-dissolving **AQUA FUN MULTIFUNCTIONAL CHLORINE TABLETS 20g** have multifunctional effects such as disinfection, algae control, coagulation and pool water clarity. Through slow-release active chlorine allow you to enjoy the comfort of clean water. The action of the tablets effectively protects the water from organic contaminants, fungi and bacteria. They facilitate flocculation, combine dirt particles effectively purifying pool water. They concentrate small impurities into larger ones. **AQUA FUN MULTIFUNCTIONAL CHLORINE TABLETS 20g** are easy to use and dispense. Product form: tablets.

Directions for use: Always before dosing **AQUA FUN MULTIFUNCTIONAL CHLORINE TABLETS 20g**, check the pH of the water with a pH tester. If it is different than 7.0-7.6, the pH of the water should be adjusted with **AQUA FUN pH-** and **AQUA FUN pH+**. Always remember to use **AQUA FUN MULTIFUNCTIONAL CHLORINE TABLETS 20g** in the evening after bathing. Be sure to check the pH level and the level of active chlorine in the pool with appropriate tests, since depending on weather conditions and the large number of bathers these parameters change. **AQUA FUN MULTIFUNCTIONAL CHLORINE TABLETS 20g** should be dosed every 7 days with 10 tablets per 20 m³ of pool water. Place the appropriate amount of tablets in the skimmer or float and turn on the circulation pump if it comes with the pool. For proper disinfection, also use **AQUA FUN CHLORINE GRANULATE** in granules at a dose of 100 g/10 m³. The residue of free chlorine in the water should be in accordance with the Regulation of the Minister of Health on the quality of water intended for human use.

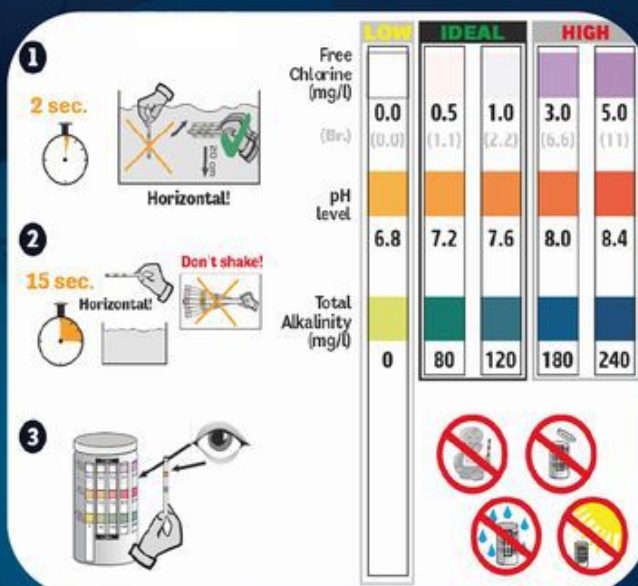

3-IN-1 STRIP TESTER

Maintaining the correct pH value is the most important task in pool water care. This value has a decisive impact on other treatments to maintain the quality of pool water. The ideal pH value is between 7.0 and 7.6. Check the pH of the water with **STAPAR 3-in-1** strip tester. If the value is different, adjust the pH of

the water with **STAPAR PH+**, which increases the pH value of the water, and **STAPAR PH-**, which decreases the pH value of the water. Be sure to check the pH and active chlorine levels with the appropriate tests, as these parameters change depending on weather conditions and the large number of bathers.

50 PASKS

1 KG, 3 KG, 5 KG

An agent for increasing the pH value of pool water to an ideal range of 7.0 - 7.6. For a fresh water effect, check the pH of pool water at least once a week.

Directions for use: always before dosing chlorine agents, check the pH of the water with a pH tester. If it is different from 7.0 - 7.6 you should adjust the pH of the water with AQUA FUN pH- and AQUA FUN pH+. To increase the pH of the water by 0.1 you should use 100 g of the agent for every 10 m³. Distribute the agent on the water surface. Be sure to dose always in the evening after bathing. Remember to check the pH level and the level of active chlorine in the pool with appropriate tests, because depending on weather conditions or the number of bathers these parameters change.

1,5 KG, 3 KG, 5 KG

An agent for lowering the pH value of pool water to an ideal range of 7.0 - 7.6. For a fresh water effect, check the pH of pool water at least once a week.

Directions for use: always before dosing chlorine agents, check the pH of the water with a pH tester. If it is different from 7.0 - 7.6 you should adjust the pH of the water with AQUA FUN pH- and AQUA FUN pH+. To lower the pH of the water by 0.1 you should use 100 g of the agent for every 10 m³. Distribute the agent on the water surface. Be sure to dose always in the evening after bathing. Remember to check the pH level and the level of active chlorine in the pool with appropriate tests, because depending on weather conditions or the number of bathers these parameters change.

STOP ALGAE

1 L, 4 L

AQUA FUN STOP ALGA is a liquid algaecide for swimming pool water, preventing the growth of algae, removing turbidity and making the water clear. Product form: liquid. It produces the best effect when combined with chlorinated agents.

Directions for use: Dose 100 g per 1 m³. If slippery deposits appear in the pool, the dose should be increased. Should be used regularly. Do not use in stocked tanks. The form of free chlorine in water should be consistent with the Regulation of the Minister of Health on the quality of water intended for human consumption. Pour the preparation into the pool and mix the water well. Bathing is recommended 15 minutes after applying the agent.

1 L, 4 L

COAGULANT

AQUA FUN COAGULANT is an agent used to clarify pool water and coagulate impurities in the water. **AQUA FUN COAGULANT** should be used in cases where the pool water is still cloudy despite the use of chlorine agents. Before using the coagulant, the pH should be stabilized so that the effect is due.

Directions for use: after checking the pH, mix AQUA FUN Coagulant with water in a bucket so as to keep the ratio in relation to the size of the pool, it should be 3 ml / 1 m³. Use AQUA FUN Coagulant for several days until the pool water becomes transparent. Contaminants that are in the pool water should sink to the bottom of the pool or float on the surface in clusters, which will allow you to collect them with a vacuum cleaner or strainer.

ACTIVE OXYGEN

1 L, 4 L

AQUA FUN OXYGEN is a formulation that works very similarly to chlorine agents. The product is used to clean and clarify pool water., by promoting flocculation and sedimentation of impurities in the water. The advantage of this preparation is the absence of the characteristic, rather pungent, chlorine smell of water and the possibility of swimming in the pool of people who are allergic to chlorine agents.

Dosage: for 1 m³, add 90 ml of the preparation, preferably in the evening after bathing. Such activity, depending on the need, should be repeated after 3-4 days. Remember that: Always before dosing the preparation, check the pH of the water with a pH tester. If it is different than 7.0 - 7.6, you should adjust the pH of the water with AQUA FUN pH- and AQUA FUN pH+.

VITAMIN C

1 L, 4L
1 KG, 4 KG

L-ascorbic acid kyselin for decolorizing pool water. How it works: **STAPAR VITAMIN C** reduces iron ions, which are responsible for the brown color of water. You only need a relatively small amount to get great results and a beautiful azure shade of water.

1 L - Directions for use: add STAPAR L-ascorbic Acid VITAMINA C at a rate of 50 ml per 1 m³ of water. While the filtration system is running, pour the product directly into the pool. Wait for the filtration cycle.

1 KG - Directions for use: add STAPAR L-ascorbic Acid VITAMINA C in a ratio of 50 - 70 g per 1 m³ of water. We mix the vitamin with water in a separate container, and after mixing we add the whole thing to the pool. Depending on the pool, the effect will be instant. The water will begin to take on an azure color. After application, there may be some dirt particles left on the bottom, which can be easily removed with a pool vacuum cleaner or with a strainer.

DRYER

500 ML,
1 L, 4 L

STAPAR DRYER is designed to degrease the walls of swimming pools. It can be used to clean pool tanks and all parts made of plastic, stainless steel and ceramics. Do not use on natural stone and aluminum surfaces. Removes grease and dirt from the edges of pool walls and adjacent surfaces. The product is more viscous and adheres better to vertical surfaces, making cleaning easier. It is formulated so that accidentally pouring the product into the pool water will not cause foaming.

Directions for use: Apply the product to the surface and leave it on for 10 minutes, then rinse with clean water. Repeat if necessary.

500 ML,
1 L, 4 L

DECALCIFIER

STAPAR DECALCIFIER is a product designed to remove lime deposits from pool walls. It can be used to clean pool tanks and plastic parts. It removes lime (scale), rust and other contaminants in and around pools, toilets and changing rooms. The product has a high ability to dissolve lime deposits, making it easier to clean pools and equipment, for example, it is biodegradable, has a higher viscosity and adheres better to vertical surfaces.

Directions for use: Apply the product to the cleaned surface, leave it on for 10-15 minutes, brush it off and then rinse thoroughly with water. Repeat if necessary.

WINTER POOL - HIBERNATOR

1 L, 2 L,
5 L, 10 L

STAPAR HIBERNATOR is a phosphorus-free liquid product that prevents the formation of hard lime deposits and greening of the water in case of warming during the winter. The product is used to winterize swimming pool water, it makes it much easier to prepare the pool for spring.

Directions for use: adjust the pH value of the water to 7.0 - 7.4. Lower the water level by 20 cm below the level of the filling pump. Then make a solution of the product by mixing it with water at a ratio of 1:10 as needed.

- 1) Drain the water from the filter system by unscrewing the drain plugs.
- 2) Protect the pump, filter and dispenser with a roll film or blanket. It is best to store them in dry and warm places.
- 3) Set the pool filter valve to winter/open or between options.
- 4) After lowering the water level in the pool, the Preparation should be poured evenly along the edges of the pool basin. The recommended dose is 30-50 ml per 1m³ of water, depending on the hardness of the water:

up to 25 d.h. = 1.5 kg per 50m³ of water

up to 30 d.h. = 2.0 kg per 50m³ of water

above 30 d.h. = 2.5 kg per 50m³ of water

*After a few hours, pour in STAPAR STOP ALGA (dosage on the label).

*After another few hours, put in a slowly dissolving tablet.

STAPAR CHLORINE TABLET 200G FOR DISPENSER (DOSAGE ON LABEL). REMOVE THE DISPENSER BEFORE THE FIRST FROST. FOLLOW THE SPECIAL PRECAUTIONS ON THE LABEL.

25 KG

SAND FOR FILTERS

CHLORINE DISPENSING BUOY

Before using the STAPAR CHLORINE DOSING BOY, adjust the pH of the pool water with the appropriate STAPAR PH+ or STAPAR PH- products, the recommended pH range is 7.0-7.6. By turning the lid of the floating buoy, set the appropriate opening through which the product will be flushed out, depending on the size of the pool. Place the buoy in the pool. Before the swimmers enter the pool, take out the floating buoy and place it in the water container. After swimming, put the buoy back into the pool. Pour the water from the container into the pool. The buoy contains 4 STAPAR 200G CHLORINE TABLETS.

SKIMMER

STAPAR SKIMMER is a liquid designed to remove and prevent excessive foaming in spas, hot tubs, pools and automatic equipment. Safe and neutral for the intended use.

Directions for use: Before using STAPAR SKIMMER, mix the calculated amount in a bucket of water and pour along the edge of the pool. Turn on the circulation pump.

Basic dosage: In swimming pools 15 ml per 1 m³ of water, hot tubs and whirlpools 25 ml per 1 m³ of water,

Additional dosage: At the reappearance of foam about 10 to 20 ml per 1 m³ of water, Preventive dosage: about 15 ml per 1 m³ of water,

Preventive dosing: approx. 15 ml per 1 m³ of water,

Dosage for automatic washing machines: approx. 5 - 15 ml per 100 l of water.

Do not mix with other chemicals before use.
